Variability of languages in time and space

Did you know that...

ÚFAL MFF UK, NPFL100

... there are languages with less than three vowels and more than 30 consonants?

... stress can be totally unbounded?

... there may be 7 consonants in one syllable?

... there may be a special case for doing something without someone?

... Hungarian has 19 cases, while old French has only two?

... English word order is not the most frequent?

... a protolanguage can be reconstructed?

... inflection and derivation are quite close to each other?

How to compare languages if they are so different?

Come on Tuesdays at 10:40-12:10 to room S6 (Malostranské náměstí 25) to answer these and many other questions about world languages together!
